# Server

Class -> Server

Responsibilities	Collaboration
- Multi-threaded server. - Always switches on. - Serves more than one client at a time. - Accepting Client request. - Having a database of all users. - Receiving message, keeps a copy of that to itself and forwards. - Decides to whom the message should go. - If the client is offline, it saves message and sends as client is online. - Keeps the history of past 15 days communication. - In some cases, if the connection is down and message is unable to be sent then responses to the sending client that message has not been sent.	

Use Cases:

Login

Logout

Block Users   List   History

|(Drop-Down curser)

1- List of users
2- Online users
